

Legend

Keys & Relationships

- PK — Primary Key (gold text; attribute name is also underlined)
- FK — Foreign Key (blue text; references another entity's PK)
- Relationship (diamond, labeled with a verb phrase)

Underlined attribute name = Primary Key attribute.

Cardinality (crow's-foot notation)

Symbol is read at the end nearest the entity it describes.

- One
- Zero-or-one (optional, single)
- One-or-many (mandatory, at least one)
- Zero-or-many (optional, many)

Example: one branch manages many accounts, read as one branch (bar) — accounts (crow's foot).

New in this version: KYC attributes on customers, present/permanent address fields, account_title, and the kyc_verified_by relationship.
